# ABOUT US

Landvin is an engineering and environmental consultancy with its origins and headquarters in Iraq and offices in the United Arab Emirates and London, UK.

Through our comprehensive suite of technical competencies, we add value from front-end analysis and risk-based decision-making to project delivery and operational support. Landvin offers this independent, integrated capability to support exploration and field development activities in line with best practices and legislative requirements. Landvin provides environmental consultancy and services, waste management, GPR, and topographic survey.

# AUTHORISED DISTRIBUTOR

Landvin proudly serves as the authorized distributor for industry leaders such as Oizom, Gradko, and Scentroid, providing unparalleled product distribution. With an unwavering focus on authenticity, quality, and reliability, we streamline the supply chain to deliver only the best. In addition,

Landvin supports several oil & gas companies in Iraq by providing air quality monitoring solutions, showcasing our commitment to advancing environmental standards. As a result, Landvin is the preferred choice for those seeking top-tier solutions in our industry. Clients trust us to consistently offer premium products that stand at the pinnacle of performance and customer satisfaction, reinforcing our position as a leader in premium distribution.

## OIZOM Instrument Pvt. Ltd.

**MANUFACTURES AUTHORISATION LETTER**

Date: 06 FEB 2023

We OIZOM Instruments Pvt. Ltd. having its registered office at 306 Indraprasth Corporate, Giga Shell Petrol Pump, Arund Nagar Road, Ahmedabad - India, hereby confirm that we will maintain our capability to supply the necessary spare parts for the environmental monitoring quality stations from our Ahmedabad factory in Gujarat, India, as per the market prices, along with the necessary technical support to our partner **LANDVIN ENVIRONMENTAL SERVICES LTD** at Floor 19, #7, Empire World, EB73 Erbil, Iraq.

**LANDVIN ENVIRONMENTAL SERVICES LTD** is the preferred partner for **IRAQ** Instruments in the **IRAQ**. They have the right to bid, negotiate, sell, supply and install on behalf of Oizom Instruments Private Limited.

Feel free to contact us for any further requirements.

Sincerely,

  
**ANKIT VAID**, DIRECTOR  
 OIZOM INSTRUMENTS PVT. LTD.

 Company: Landvin

To Whom it may concern

This is to confirm that Landvin company located at Empire Business Tower-3 Floor 19, Erbil, Iraq is our Authorized distributor in Iraq.

They will be responsible for submission of offer, negotiations, supply, and training and after sale service. They are also authorized to provide maintenance, installation, commissioning and training services to our End Users.

They will provide below points after the purchase:

1. Technical training support to bidder's personnel
2. Providing spare parts upon request
3. Software maintenance
4. Physical maintenance of equipment.

Landvin is the ONLY distributor in Iraq who has attended and passed all training session in Scentroid Manufacture and obtain our certification therefore they have deep knowledge on selling and service of our chemical analyzers and they are recommended by us.

With warm regards,

  
**Babak Baktari**  
 Sales Director

## Conservation, Restoration, Sustainability.

Landvin is officially registered with the Ministry of Environment of Iraq under registration number 5639 and is authorized to operate throughout Iraq. As an experienced environmental contractor, we have successfully completed numerous Environmental and Social Impact Assessments (ESIA) for projects across the region while consistently supporting our clients in meeting IFC Performance Standards.

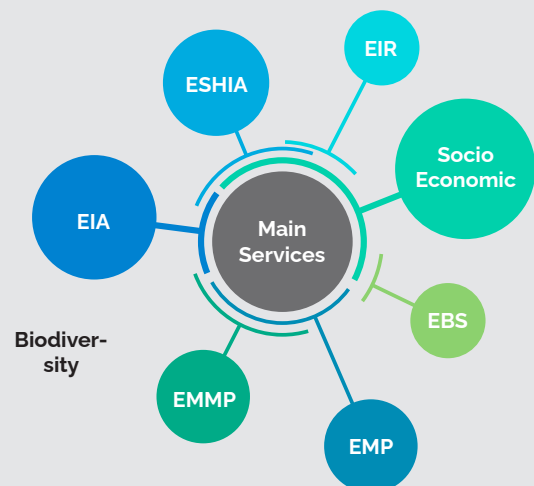

Our network of internationally recognized technical experts, including cultural analysts, geologists, biologists, archaeologists, and regulatory analysts, ensures that we address the political, cultural, security, and religious challenges inherent in the region. This expertise is evident in our successful completion of baseline environmental surveys, impact assessments, audits, and permit applications that support

development activities throughout Iraq. Currently, we are assisting industry leaders such as Kept Energy, HKN Energy, and Kar Company in fulfilling their IFC environmental requirements.

Dedicated to continuous innovation, Landvin combines local insight with international expertise to deliver sustainable, cost-effective, and environmentally responsible solutions that adhere to national regulatory requirements and global best practices. Our commitment to excellence, safety, and environmental stewardship has earned us a trusted reputation as a reliable partner for clients across various sectors, positioning us to effectively meet and exceed the needs of the Ministry of Environment and other regulatory bodies.

### Environment Fields

Environment fields encompass ecology, conservation, renewable energy, sustainable development, climate science, and environmental policy. Interdisciplinary efforts in these fields aim to address ecological challenges and create a harmonious coexistence with nature.

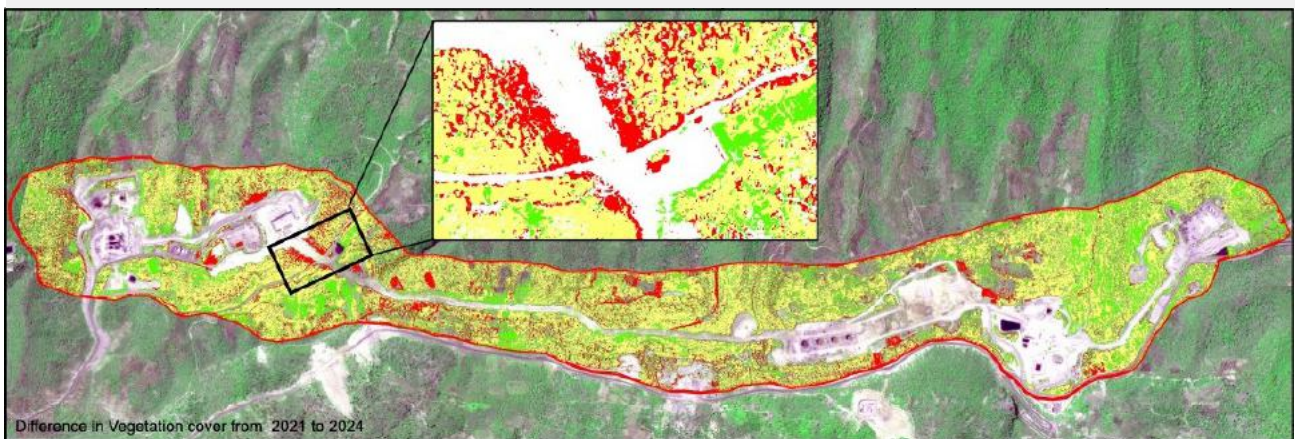

# BIODIVERSITY

## Previous Projects and the Role of Landvin in Environmental Impact Assessments

Landvin Company has extensive experience in conducting Biodiversity study across Iraq, working with various key developers on diverse projects. Our expertise includes critical habitat assessments to identify sensitive areas and prioritize conservation efforts.

As part of our commitment to a thorough EIA process, Landvin actively monitors biodiversity during project operations, ensuring ongoing protection of local ecosystems.

We also provide tailored alternatives and innovative solutions to minimize and mitigate potential negative impacts, aligning development with sustainability and conservation goals.

## OVERVIEW

Air quality refers to the state of the air we breathe. It is assessed based on the concentration of pollutants, including particulate matter, ozone, nitrogen dioxide, and sulfur dioxide. Monitoring air quality is essential to understand its impact on human health and the environment.

There are many drivers for the monitoring of ambient air quality stemming from the desire to minimize the risks to public health. As a consequence, air quality monitoring is increasingly a requirement for polluting industries as part of environmental regulation and responsible operation Corporate Social Responsibility.

### Accurate & Affordable Environmental Monitoring Solutions

Oizom offers end-to-end and scalable solutions for real-time air quality monitoring and advanced data analytics.

### Flexible Sensing and Compact Design

Our Product has been designed to hold multiple individual sensors. these can be specified from a list of over 50+ traceable chemical compounds.

## Importance of Monitoring

Monitoring air quality is crucial for assessing pollution levels. This process helps identify regions with poor air quality, understand pollutant sources (such as vehicle emissions and industrial activities), and implement measures to mitigate pollution's adverse effects.

## Common Sources of Pollution

Air pollution stems from various sources, including vehicle emissions, industrial processes, power plants, agricultural practices, and residential heating. Pollutants released, such as carbon monoxide and particulate matter, can have detrimental effects on air quality.

## Air Quality Index (AQI)

The Air Quality Index (AQI) is a numerical scale used to communicate air quality to the public. It considers multiple pollutants and categorizes air quality from "Good" to "Hazardous," providing an overall assessment of potential health effects associated with the current air quality.

INNOVATE.  
SUSTAIN.  
GROW.

Landvin has forged a strong collaboration with ALS for comprehensive soil and water sample analyses. We proudly leverage the expertise of ALS, an esteemed international laboratory headquartered in Prague, Czech Republic. ALS boasts the requisite certifications and accreditations, ensuring the highest standards in sample analysis.

At Landvin, we prioritize delivering top-notch environmental solutions. Our dedicated team has meticulously developed a proven sampling strategy and approach that not only meets but exceeds our clients' needs. With a commitment to excellence, we stand as your reliable partner in environmental consulting and analysis.

# AIR QUALITY MONITORING

## OIZOM

Oizom is a Smart Air Quality Monitoring Solutions company offering data driven environmental solutions for better decision making. Using our sensor-based hardware, we monitor various environmental parameters related to air quality, noise, odour, weather, radiation etc.

### Cleaning

Maintenance and cleaning should be carried out regularly, which includes cleaning the dome for the light sensor, air inlet, outlet mesh and the exterior.

### Sensor Replacement

The sensors need to be replaced once their performance starts to deteriorate and the system starts giving unstable data.

### Diagnosis/Debugging

Power and network availability are the prime check in case of equipment failure. If the issue is still unresolved after remote diagnosis, on-site troubleshooting can be planned by an engineer.

### Spot-Calibration

Spot calibration can be performed using reference equipment to ensure data accuracy.

# DIFFUSION TUBE

## Gradko

Landvin supplies cost-effective air pollution diffusion tube monitors for inorganic and Volatile Organic Compounds (VOCs) as well as units for quantification of particulates.

## Cloud Server Hosting

Landvin is an authorised distributor of Gradko international in Iraq for all types of diffusion tubes. Gradko are a leading supplier of diffusion tubes (also known as Palmes tubes) for detecting levels of pollutants in the air, both indoors and outdoors. A wide range of pollutants can be detected included Volatile Organic Compounds (VOCs), Nitrogen Dioxide NO<sub>2</sub>, Sulphur Dioxide SO<sub>2</sub>, Ozone O<sub>3</sub>, Nitrogen Oxide NO, Hydrigen Sulphide H<sub>2</sub>S, Anaesthetic gases, Ammonia NH<sub>3</sub>, Combined NO<sub>2</sub> SO<sub>2</sub>, BTEX, Acid gases, Formaldehyde and particulates.

## SL50 Scentinal

Scentinal is a continuous ambient pollutant and odor emission monitoring system which operates through high accuracy (ppb level) sensing technology. Scentinal can provide simultaneous monitoring of odorous and non-odorous gases such as Hydrogen Sulfide (H<sub>2</sub>S), Sulfur Dioxide (SO<sub>2</sub>), Ammonia (NH<sub>3</sub>), Methane (CH<sub>4</sub>), Carbon Dioxide (CO<sub>2</sub>), and many other Volatile Organic Compounds (VOCs).

Scentinal uses up to 20 sensing modules ranging from Photo-Ionization Detectors, Non-Dispersive Infrared Detectors, Electro-Chemical Cells, Laser Scattered counters and Metal Oxide sensors. The data collected from sampling is stored locally and is also transmitted to the cloud server, providing easy accessibility. The Sensor Information Management System (SIMS3) is used to store and display the results from monitoring and sampling campaigns while also providing capabilities for remote configuration, calibration, and diagnosis of multiple Scentinal units.

# PIT REMEDIATION

Drilling is one of the major operations in upstream Oil and Gas in KRG industry that can potentially impact the environment through generation of different types of wastes.

Waste management is technology of treating disposing off drilling operation's wastes to meet regional and international environmental regulations criteria to safe human and the nature of Kurdistan from drilling waste impacts.

Efficiently separating disposal solid and waste from usable fluids materially impacts projects and fluids performance, leveraging in house mechanical and thermal expertise, Landvin significantly reduces waste disposal volumes and increase fluids recovery and reuse, resulting in substantial cost savings for operator clients.

Landvin works closely with rig operator, service contracts and operator clients to customize integrated drilling and waste management configurations for optimal fluid recovery, reduced dilution rates, less waste generation and lower costs.

Contaminated Soil	Drill Cuttings	Waste Liquid
		
Waste Water & Oil	Waste Solid	
		

Currently Landvin focusing is on the Pit remediation projects with Various customers across Kurdistan, the potential of investing in treating the cutting pits for the drilling operations in Kurdistan is what drove Landvin to focus on the area that added value to both the customers and the country.

Landvin had performed several projects with different operators where they prove capability and success.

LandVin team has experience in providing waste management services to public and private sectors in the region since 2016. We work in collaboration with International Oil Companies (IOCs) as well as International Environmental Engineering Companies to re-innovate our concept of waste management through not burial nor incineration, but through recycling. Our contemplated waste management plan is fully and successfully effective in workplace area, particularly in the field operation, thus supporting IOCs with their hydrocarbon exploration and production activities.

We have found several recycling strategy solutions, working hard to eliminate any waste to be buried with our recycling approach. Our aim is to maximize the benefits of recycling in the region as well as contributing the waste management culture among companies, residential area and government.

We have found several recycling strategy solutions, working hard to eliminate any waste to be buried with our recycling approach. Our aim is to maximize the benefits of recycling in the region as well as contributing the waste management culture among companies, residential area and government.

## Core Services

- Waste Management Plan (WMP) Preparation
- WMP Implementation
- Coordination
- Waste Asset/Item (i.e. Dumpster, bins, barrels etc.) Services
- Waste Pick-up Services (Waste Transportation Services)
- Waste Recycling Facilities
- Waste Storage Facilities
- Waste Incineration Service
- Waste Water Service
- Waste Tracking (GPS)
- Record & Documentation
- Waste Management Service Monitoring

Unlock the hidden secrets beneath surfaces with our advanced Ground Penetrating Radar (GPR) technology. Using radio waves, our detection method precisely identifies buried or concealed components within structures or beneath various surfaces. Our GPR solutions boast the capability to detect a broad spectrum of objects, both metallic and non-metallic, making them suitable for a wide range of applications.

Explore the depths with confidence, as our GPR technology offers unparalleled accuracy and versatility, ensuring comprehensive detection for your diverse needs. Whether you are involved in construction, environmental management, archaeology, or infrastructure maintenance, our GPR solutions provide the insights you need to make informed decisions and enhance project efficiency.

Join us on a journey of innovation and precision. Contact Landvin today to explore how our cutting-edge GPR solutions can elevate your projects to new heights.

## DEVICE CAPABILITY

- ✔ Search for subservices and telecommunications.
- ✔ Structural engineering analysis (buildings, bridges, dams, etc.).
- ✔ Search for hidden objects and analysis of metallic and non-metallic buried objects (pipes, voids, constructions, etc.).
- ✔ Foundation analysis and structural investigations.
- ✔ Location of armor in construction.
- ✔ Search for underground constructions (tunnels, sewers, etc.).
- ✔ Search for sources of leaks from pipes using indirect signs (excessive humidity).
- ✔ Investigations into landslides.
- ✔ Search and localization of gaps, cracks, and heterogeneous inclusions.
- ✔ Search for buried historical structures.
- ✔ Exploration of the land structure in basements.
- ✔ Profiling of subsurface deposits.
